Coffey,T.J., Daniels,M., Enright,M.C. and Spratt,B.G.
Serotype 14 variants of the Spanish penicillin-resistant serotype
9V clone of Streptococcus pneumoniae arose by large recombinational
replacements of the cpsA-pbpla region
Microbiology 145 (Pt 8), 2023-2031 (1999)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AF139886 2160 bp Streptococcus pneumoniae strain' 1a (pbpla) gene, complete cds. Coffey,T.J., Daniels,M., Enright,M.C. and Spratt,B.G.
Serotype 14 variants of the Spanish penicillin-resistant serotype
9V clone of Streptococcus pneumoniae arose by large recombinational
replacements of the cpsA-pbpla region
Microbiology 145 (Pt 8), 2023-2031 (1999)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       University of Oxford, South 3PS, UK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   99392464
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0463168

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence encodes a protein from Streptococcus pneumoniae.

The nucleic acid sequence encoding the Streptococcus pneumoniae protein can be useful in vaccines for inducing protective antibodies against Streptococcus pneumoniae, for treatment or prevention of infection e.g. pneumonia, otitis media or meningitis. Probes based on the nucleic acid are used to detect Streptococcus infection (by usual hybridisation or amplification methods), also for isolating Streptococcus genes or their allelic variants. The protein can be used similarly to detect specific antibodies in standard immunoassays, especially for diagnosing or monitoring infections. Antibodies which bind the protein are used to detect corresponding antigens, to purify the protein and for passive immunisation (optionally coupled to a toxin). Vaccines are administered, e.g. by injection, orally or through the skin, typically at 0.01-1000 (especially 10-300) mu g/ml per dose.

The present invention describes a computer readable medium which has the nucleotide sequences SEQ ID NO:1 to 391 (AAV52134 to AAV52524) recorded on it, or a representative fragment or a sequence at least 95% identical to SEQ ID NO:1 to 391. The nucleotide sequences depicted in SEQ ID NO:1 to 391 (AAV52134 to AAV52524) are genomic fragments from Streptococcus pneumoniae. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S.pneumoniae genome (SEQ ID NO:1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a probe a target sequence defined by any of the sequences in SEO ID NO:1 to 391, identifying members of the library which contain sequences that hybridise to the target sequence and isolating the nucleic acid molecules from the members; or (b) isolating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2278/c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δõ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches 1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  mRNA, DNA or cDNA produced from an organism, amplifying nucleic acid molecules whose nucleotide sequence is homologous to amplification primers derived from the fragment of the S. pneumoniae genome to prime the amplification and isolating the amplified sequences. The computer readable medium can be used in a computer-based system for identifying fragments of the S. pneumoniae genome of commercial importance, or expression modulating fragments of the S. pneumoniae genome.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                 The present sequence encodes a soluble variant of the S. pneumoniae penicillin binding protein (PBB) 1A, which lacks the 1st 38 amino acid residues of the wild type protein. Wild type PBB is a bifunctional protein, which binds the cell membrane when expressed in a bacterial cell, having transglycosylase and transpeptidase activities. The variant protein (NCIMB 4065) in conjunction with a labelled anti-bifunctional PBP monoclonal antibody, can be used to identify and assay for cpds. which bind bifunctional PBP. Such cpds., as inhibitors of bifunctional PBB have a potential use in therapeutic cpds. which inhibit the growth of antibiotic resistant bacteria. The soluble variant may also be used in X-ray crystallography.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Penicillin binding protein; PBP IA; bifunctional protein; transglycosylase; transpeptidase; identification; assay; inhibitor; antibiotic resistant; bacteria; soluble variant; protein structure; X-ray crystallography; determination; ds.

                                                                                     δÃ
                                                                                                                                                                      The present invention describes a method for generating a repertory of concleic acids of tuf, fus, atpD and/or recA genes from which probes conditions are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical consecues with a combination of defined primer pairs. The method can be consecued microorganisms e.g. algae, archaea, bacteria, fungal and parasitical constants. The method can be considered microorganisms e.g. algae, archaea, bacterian, fungal and grassitical species, genus, family and group. A nucleic acid (I) contained using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the detection of any bacterium, fungus or parasite in a sample and for the consequence of the least one toxin gene. hexa nucleic acids are used for the specific and ubiquitous detection and for identification of streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against convict on the detected include Abiotrophia addacens, Bordetella sp., convictes faster results than substrate specificity or phylum or group convictes faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved.

Canahoullo to Aahoullo to Aahoullo to persent nucleotide sequences and primers/probes which are given in the exemplification of the present invention.
                                                                                                               Query

cc prokaryotic cellular proliferation, their use in identifying the cg genes, their use in the discovery of novel antibiotics, the essential cc genes themselves and the encoded proteins. The prokaryote used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella cc invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins. Cc and to obtain antibodies capable of binding to the expressed proteins. Cc The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen compounds of proteins of the variety of organisms. The present sequence encodes an except a vaide variety of organisms. The present sequence encodes an cc essential protaryotic cellular proliferation protein.

Cc Note: The sequence data for this patent did not form part cc format directly from WIPO at the cc format directly from WIPO at the cc format directly from WIPO at the content of the printed specification, but was obtained in electronic cc format directly from WIPO at the content of the printed specification at the content of the printed specification of the content directly from WIPO at the content directly from WIPO at the content of the printed specification in the content of the printed specification at the content of the printed specification of the content directly from WIPO at the content of the content

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC nucleic acids of tuf, fus, atpD and/or recA genes from which probes of and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical cc species with a combination of defined primer pairs. The method can be cused for producing probes and/or primers for detecting one or more crelated microorganisms e.g. algae, archaea, bacteria, fungi and cetection and identification of an algal, archaeal, bacterial, fungi and cetection and identification of an algal, archaeal, bacterial, fungal cd and parasitical species, genus, family and group. A nucleic acid (I) cobtained using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the cd detection of any bacterium, fungus or parasite in a sample and for the least one toxin gene. hexA nucleic acids are used for the specific and coldiquitous detection and for identification of streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against coldiquitous detected include Abiotrophia adiacens, Bordetella sp., corynebacteriams. Microbial species or genus or family or phylum or group corynebacteriams sp., Enterobacteriaceae group, Escherichia coli, corynebacteriaceae family, Pseudomonads group, Streptococcus sp., corynebacteriaceae family, Pseudomonads group, Streptococcus sp., corynebacteriaceae family, Pseudomonads group, Escherichia coli, coli, coli, coli, coli, coli, coli, coli, col

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δÃ
                                              Nucleic acid sequences are used to generate universal probes a primers which can be used to identify and detect the presence archaeal, bacterial, fungal and parasitical species in a test

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1778
```

The present invention describes a method for generating a repertory of CC nucleic acids of tuf, fus, atpp and/or recA genes from which probes cand/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more crelated microorganisms e.g. algae, archaea, bacteria, fungi and detection and identification of an algal, archaeal, bacterial, fungil and combination of an algal, archaeal, bacterial, fungil and comparasitical species, genus, family and group. A nucleic acid (I) comparasitical species, genus, family and group. A nucleic acid (I) comparasition of any bacterium, fungus or parasite in a sample and for the detection of any bacterium, fungus or parasite in a sample and for the comparation of any bacterium, fungus or parasite in a sample and for the comparation of any bacterium, fungus or parasite in a sample and for the comparation of any bacterium of indentification of Streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against comparation of the detection and for identification of Streptococcus pneumoniae. (Compabacteriams, microbial species or genus or family or phylum or group comparation of the detection and include Abiotrophia adiacens, Bordetella sp., comparation of a star results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved.

Chahloolo to AAHO02304 represent nucleotide sequences and primers/probes which are given in the exemplification of the present invention.

δÃ

The present invention describes a method for generating a repertory of nucleic acids of tuf, fus, atpb and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more

e.g. algae,

or more

A nucleic acid (I) obtained using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the detection of at least one antimicrobial agent resistance gene or at least one toxin gene, hexa nucleic acids are used for the specific and ubiquitous detection and for identification of Streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia addacens, Bordetella sp.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Corynebacterium sp., Enterobacteriaceae group, Escherichia coli, Mycobacteriaceae family, Pseudomonads group, Streptococcus sp., Weisseria gonorrhoeae and Staphylococcus sp., Using DNA based tests provides faster results than substrate specificity tests as results be determined in an hour and improved accuracy is also achieved. AAH00010 to AAH002304 represent nucleotide sequences and primers/prowhich are given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence

The present invention describes a method for generating a repertory of CC nucleic acids of tuf, fus, atpD and/or recA genes from which probes CC and/or primers are derived. The method comprises amplifying the nucleic CC acids of determined algal, archaeal, bacterial, fungal and parasitical Species with a combination of defined primer pairs. The method can be CC used for producing probes and/or primers for detecting one or more CC related microorganisms e.g. algae, archaea, bacteria, fungi and CC parasites, for universal detection and for specific and ubiquitous CC detection and identification of an algal, archaeal, bacterial, fungal CC and parasitical species, genus, family and group. A nucleic acid (I) CC obtained using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the detection of any bacterium, fungus or parasite in a sample and for the cast one antimicrobial agent resistance gene or at least one antimicrobial agent resistance gene or at least one toxin gene. hexA nucleic acids are used for the specific and CC ubiquitous detection and for identification of Streptococcus pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of algal, archaeal, bacterial, fungal and parasitical species in a test sample -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     identification; algal; archaeal; bacterial; fungal; parasitical; microorganism; diagnosis; translation elongation factor Tu; toxi translation elongation factor G. Enterobacteriaceae group, Escherichia coli, Mycobacteriaceae family, Pseudomonads group, Streptococcus sp., Neisseria gonorrhoae and Staphylococcus sp. Using DNA based tests provides faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved. AAH00010 to AAH002304 represent nucleotide sequences and primers/probes which are given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (I) can be used to design a therapeutic agent which is effective microorganisms.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     멍
                                                                                                                                                                                                                                                 CC detecting an antibiotic resistant strain of Streptococcus pneumoniae CC using primers based on the penicillin binding protein 2B (pbp2B) gene CC and the pbp1B gene. The products and methods can be used for detecting CC s. pneumoniae, particularly antibiotic-resistant strains. They can be used for simultaneously diagnosing pneumonoccal meningitis and CC identifying any antibiotic-resistant S. pneumoniae strains in a sample. CC The methods can be used for detecting S. pneumoniae strains resistant CC The assays can be adapted to detect an antibiotics, preferably penicillin. CC The assays can be used to detect an antibiotic resistant strain of CC S. pneumoniae with a minimum inhibitory concentration (MIC) of CC S. pneumoniae with a minimum inhibitory concentration (MIC) of CC S. pneumoniae with a minimum inhibitory concentration are a 1043 bp and CC a 224 bp product. The present sequence represents a Streptococcus concentration penicillin transpeptidase encoding region (TER) isolate nucleotide concentration from the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             γQ
                                                                                                              CC A polymerase chain reaction (PCR) assays have been developed for CC detecting an antibiotic resistant strain of Streptococcus pneumoniae CC using primers based on the penicillin binding protein 2B (pbp2B) gene and the pbp1A gene. The products and methods can be used for detecting CC s. pneumoniae, particularly antibiotic-resistant strains. They can be used for simultaneously diagnosing pneumococcal meningitis and CC identifying any antibiotic-resistant s. pneumoniae strains resistant CC The methods can be used for detecting S. pneumoniae strains resistant to antibiotics, e.g. beta-lactam antibiotics, preferably penicillin. CC The assays can be used to detect other pathogens causing meningitis. The assays can be used to detect an antibiotic resistant strain of CC pneumoniae with a minimum inhibitory concentration (MIC) of C 0.25-1 micro g/ml where the PCR products detected are a 1043 bp and CC 224 bp product. The present sequence represents a Streptococcus pneumoniae pbp1A transpeptidase encoding region (TER) isolate nucleotide sequence from the present invention.

                                                                                                              Qy
                                                                                                                                               A polymerase chain reaction (PCR) assays have been developed for CC detecting an antibiotic resistant strain of Streptococcus pneumoniae CC using primers based on the penicillin binding protein 2B (pbp2B) gene CC and the pbp1A gene. The products and methods can be used for detecting CC s. pneumoniae, particularly antibiotic-resistant strains. They can be CC used for simultaneously diagnosing pneumococcal meningitis and CC identifying any antibiotic-resistant s. pneumoniae strains in a sample. CC The methods can be used for detecting S. pneumoniae strains in a sample. CC The assays can be used for detecting S. pneumoniae strains resistant CC to antibiotics, e.g. beta-lactam antibiotics, preferably penicillin. CC The assays can be used to detect other pathogens causing meningitis. CC S. pneumoniae with a minimum inhibitory concentration (MIC) of CS. pneumoniae with a minimum inhibitory concentration (MIC) of CS. I micro g/ml where the PCR products detected are a 1043 bp and CC a 224 bp product. The present sequence represents a Streptococcus CC pneumoniae bpihA transpeptidase encoding region (TER) isolate nucleotide CC sequence from the present sweeted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ъ
                                            A polymerase chain reaction (PCR) assays have been developed for CC detecting an antibiotic resistant strain of Streptococcus pneumoniae CC using primers based on the penicillin binding protein 2B (pbp2B) gene CC and the pbp1A gene. The products and methods can be used for detecting S. pneumoniae, particularly antibiotic-resistant strains. They can be used for simultaneously diagnosing pneumococcal meningitis and CC identifying any antibiotic-resistant S. pneumoniae strains in a sample. CC The methods can be used for detecting S. pneumoniae strains resistant to antibiotics, e.g. beta-lactam antibiotics, preferably penicillin. CC The assays can be used to detect an antibiotic resistant strain of CC s. pneumoniae with a minimum inhibitory concentration (MIC) of CC S. pneumoniae with a minimum inhibitory concentration and 3 bp and CC a 224 bp product. The present sequence represents a Streptococcus concentration phyla transpeptidase encoding region (TER) isolate nucleotide concentration from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1201
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1715

The present invention describes a method for generating a repertory of CC nucleic acids of tuf, fus, atpD and/or recA genes from which probes CC and/or primers are derived. The method comprises amplifying the nucleic CC acids of determined algal, archaeal, bacterial, fungal and parasitical CC species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more CC used for producing probes and/or primers for detecting one or more CC related microorganisms e.g. algae, archaea, bacteria, fungal and CC parasites, for universal detection and for specific and ubiquitous CC detection and identification of an algal, archaeal, bacterial, fungal CC and parasitical species, genus, family and group. A nucleic acid (I) and parasition of any bacterium, fungus or parasite in a sample and for the CC detection of at least one antimicrobial agent resistance gene or at CC least one toxin gene. hexA nucleic acids are used for the specific and CC ubiquitous detection and for identification of Streptococcus pneumoniae. CC (I) can be used to design a therapeutic agent which is effective against CC which can be detected include Abiotrophia adiacens, Bordetella sp., Forberichia acid. Corynebacterium sp., Enterobacteriaceae group, Escherichia coli, Mycobacteriaceae family, Pseudomonads group, Streptococcus sp., Neisseria gonorrhoeae and Staphylococcus sp., Using DNA based tests provides faster results than substrate specificity tests as results hour and improved accuracy also achieved can

A polymerase chain reaction (PCR) assays have been developed for detecting an antibiotic resistant strain of Streptococcus pneumoniae using primers based on the penicillin binding protein 2B (pbp2B) gene and the pbp1A gene. The products and methods can be used for detecting S. pneumoniae, particularly antibiotic-resistant strains. They can be used for simultaneously diagnosing pneumoncoccal meningitis and identifying any antibiotic-resistant S. pneumoniae strains in a sample.

The assays can be adapted to detect other pathogens causing meningitis. The assays can be used to detect an antibiotic resistant strain of S. pneumoniae with a minimum inhibitory concentration (MIC) of 0.25-1 micro g/ml where the PCR products detected are a 1043 bp and a 224 bp product. The present sequence represents a Streptococcus pneumoniae publa transpeptidase encoding region (TER) isolate nucleotid
                                                                                                                                                                         1235
